

Mohammad Sabur Ali Mahdi

+44 7706 798873 • mohammadalimahdi26@gmail.com • LinkedIn • GitHub

Education

Queen Mary University of London

MSci Computer Science with Honours

London, UK

Sep 2024 – June 2028 (Expected)

- Year 1 & Year 2: **First Class Average (80%+)**

Projects

Happy Tails (Pet Care Platform) | React, Node.js, JavaScript, SQL, Figma, REST APIs

GitHub

- Developed the majority of the React frontend, implementing booking workflows, messaging, pet owner profiles, pet minder profiles, pet minder search and availability management.
- Connected React components to Node.js backend by modifying REST API endpoints to support booking creation, messaging and specific user data retrieval.
- Debugged and resolved full stack integration issues including booking synchronisation, calendar availability, message routing and file uploads to ensure data remained consistent between multiple users.

Weather Navigation App | React, JavaScript, Google Maps API, OpenStreetMap API, Figma

GitHub

- Built React settings interfaces for driver preferences, notifications, weather overlays and FAQ pages. This enabled users to customise route planning and weather risk alerts.
- Integrated settings across React components by modifying full forecast, routing and weather overlays modes, ensuring driver preferences can dynamically update weather risk calculations, notifications and map overlays.
- Resolved routing, destination validation, weather overlay and driver risk issues by resolving incorrect API data handling dropdown display problems and map interaction bugs.

LLM Dungeon | Python, Ollama

GitHub

- Built an LLM powered text based dungeon agent using a local Ollama model, enabling automatic decision making across the text adventure environment.
- Designed observation prompts and valid action constraints, improving the model's ability to reason across multiple turns using inventory, enemies, nearby objects and valid actions.

CitiSim (NVIDIA Hackathon) | React, FastAPI, PostgreSQL, NVIDIA Nemotron

GitHub

- Built a React dashboard for an AI powered city operations platform, visualising transport and weather insights through charts, line graphs, search and voice input.
- Integrated frontend components with FastAPI, fetching live city data with JSON fallback handling to support simulation and recommendation systems.
- Debugged PostgreSQL persistence issues where the system repeatedly fell back to JSON storage. Investigated the data pipeline failure and backend integration problems during the NVIDIA hackathon.

Experience

Queen Mary University of London

Lab Demonstrator

Oct 2025 – Present

- Demonstrated programming, professional and software engineering concepts to first year Computer Science students.

Outlier

AI Evaluator (Self-employed)

Jan 2025 – Present

- Evaluated AI model responses, code, peer written prompts and testing methods to check for correctness, appropriate task difficulty and alignment with task objectives.

UBS (Work Experience)

Group Operations & Technology Office

Jun 2023

- Completed a 5 day UBS work experience: built a Power BI library system and gained exposure to how financial data is stored on databases.

Skills

Languages & Frameworks: Python • Java • JavaScript • TypeScript • PHP • SQL • React • Node.js • Tailwind CSS

Tools: Git • GitHub • Figma • XAMPP • Overleaf
