🌐 Mohammad Mahdi

Education

Queen Mary University of London

London, UK

MSci Computer Science with Honours

Sep 2024 – Present

- Year 1 & Year 2: **First-class average (80%+)** Software Engineering, Object Oriented Programming, Algorithms and Data Structures, Computer Systems and Networks.
- Projects: Built a full-stack application using Node.js and React; PHP/SQL app (XAMPP); integrated APIs for map routing, weather overlays and live weather data.

Experience

Queen Mary University of London

Demonstrator & Buddy Mentor

Oct 2025 – Present

- Demonstrator: supporting Year-1 labs (programming, debugging, tooling, documentation), explaining core CS concepts and best practices to students.
- Buddy Mentor: Acted as a first point of contact for first year students, answering questions on university life, campus services and academic routines to provide reassurance during personal and academic transitions.

Outlier

AI Evaluator (Self-employed)

Jan 2025 – Present

- Assessed outputs from three AI models for clarity, correctness, and alignment with task objectives, ensuring high-quality and accurate responses.
- Reviewed and corrected AI-generated code, while evaluating peer written prompts and testing methods to improve accuracy and to ensure appropriate prompt difficulty.

UBS (Work Experience)

Group Operations & Technology Office

Jun 2023 – Jun 2023

- Completed a 5-day internship in data management and analytics, gaining insight into how UBS stores, structures, and secures large-scale financial data.
- Built a small library system using Power BI to develop skills in database design and data visualisation, while observing how data supports risk management and investment decisions and presenting key insights from the placement.

Projects

Weather Navigation App: Built a React application which uses Google Maps API and Weather API to display real-time routing, start/end location points, live weather overlays, and API-driven risk displays to support safer driving decisions.

Pet Minder App: Developed a full stack pet care platform to support booking for pets. Developed backend using Node.js and contains features for bookings, messaging and pet management. Alongside a React frontend for booking creation, pet profile creation and availability management. Also built a web based customer support dashboard to review verification documents and approve or reject new users.

Amanah - STEM Hackathon: Collaborated in a team to build a RAG based platform for verifying Islamic social media content. Contributed to Figma prototype design, desktop/mobile workflows and features including a confidence score and scholar reviews for uncertainty claims.

LLM Dungeon: Built a LLM powered text based adventure game which allows a local model to understand the context of the game and make decisions based on multiple observation turns. Implemented valid action handling, prompt design and logging to test how the LLM navigates levels, collects items, handles enemies and reaches the goal.

HorseRaceSimulator: A Java simulation of horse racing with two versions: text based (console) and GUI (Java Swing). Implemented race logic and horse class. Designed an interactive graphical interface with animations and image assets. Built with standard Java libraries (JDK 11+).

Skills

Programming: Python, Java, JavaScript (React, Node.js, JSX), TypeScript, Tailwind CSS, PHP, SQL

Tools: Git/GitHub, XAMPP, Overleaf, Figma, OpenStreetMap

Strengths: Technical writing, stakeholder communication, adaptability

Additional

Other Experience: Springpod Technology Work Experience, Student Consultant (QMUL)

Certifications: Coursera Deep Learning AI (Aug 2025); Bright Network Couch To Code (2025)
